## **DETAILED ACTION**

### ***Election/Restrictions***

Newly submitted claims 50-55 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: claims 50-55 constitute a separate and distinct species from that of originally elected claims

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 50-55 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 3, 9, 15 and 47-49 are rejected under 35 U.S.C. 102(e) as being anticipated by Yamazaki et al ('887)

The applied reference has a common inventor/assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived

Art Unit: 2813

from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

In reference to claims 3 and 47, Yamazaki teaches a device comprising:

a pixel portion having a plurality of gate wirings (Fig.1 (107 and 113-and Fig.26 has the same source wirings but not labeled), a plurality of source wirings (Fig.26 (4139a-b, 4137)) intersecting said plurality of gate wirings(Fig.26 (4139a-b, 4137), a plurality of banks provided over said plurality of gate wirings (Fig.26 (4144b)), at least one thin film transistor (Fig.26 (4102) surrounded by said plurality of gate wirings and said plurality of said source wirings, and an EL element (Fig.26 (4105) electrically connected to said thin film transistor (Fig.26 (4102), wherein said pixel portion comprises a plurality of pixel rows (Fig.26 (4143)) divided along said plurality of banks, and wherein said plurality of pixel rows comprise a first pixel row in which a red light emitting layer is formed, a second pixel row in which a green light emitting layer is formed, and a third pixel row in which a blue light emitting layer is formed (Col.32, lines: 35-50 and Fig.27 A and B) and wherein each of the plurality of pixel rows comprises at least two pixels and a light emitting layer covering the two pixels (Col.32, lines: 45-55).

In reference to claims 9 and 48, Yamazaki teaches wherein said red light emitting layer, said green light emitting layer and said blue light emitting layer comprise high molecular organic EL materials (Col.32, lines: 35-50).

Art Unit: 2813

In reference to claims 15 and 49, Yamazaki teaches wherein said EL display device is incorporated into an electronic device selected from the group consisting of a video camera, a digital camera, a goggle type display, a car navigation system, an audio reproducing device, a personal computer, a game equipment, and a portable information terminal (Col.37, lines: 10-20).

### ***Response to Arguments***

Applicant's arguments filed 2/11/05 have been fully considered but they are not persuasive. Applicant argues that Yamazaki fails to teach a pixel row with at least two pixels; however such an argument is not persuasive because a pixel row is in fact a row of pixels which is more than one pixel. Moreover, the light emitting layer is formed over the pixels (Col.32, lines; 35-45).

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

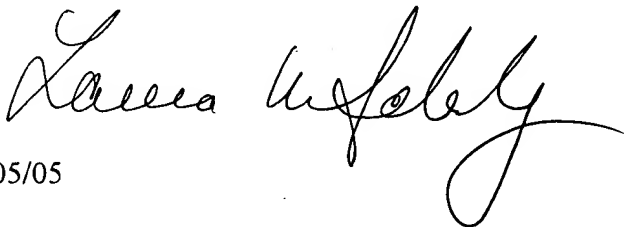

Art Unit: 2813

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
